AI and application Development and jira

M2: Practical –11

Roll No.:T050	Name: Aashu Yadav
Class:TYIT	Batch:1
Date of Assignment:26-9-2026	Date/Time of Submission:26-9-2026

Aim:- : Jira Automation

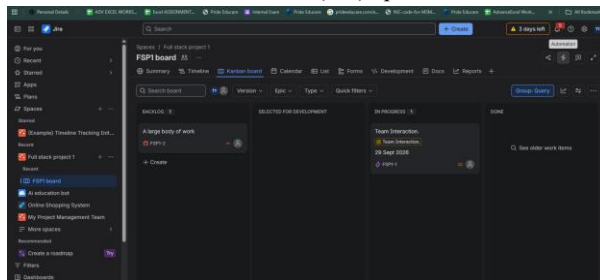

A. Create an Automation Rule
(Trigger →Condition → Action)

Theory:

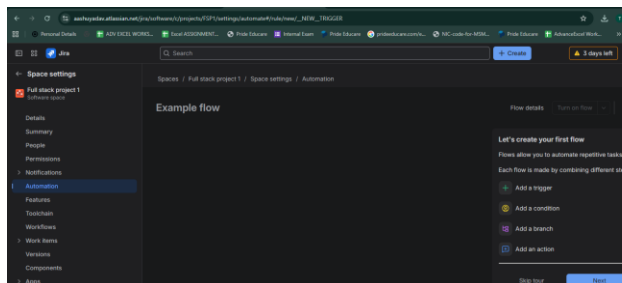

Jira Automation is used to perform tasks automatically when a specified event occurs. An automation rule generally contains a Trigger, Condition and Action.

Steps:

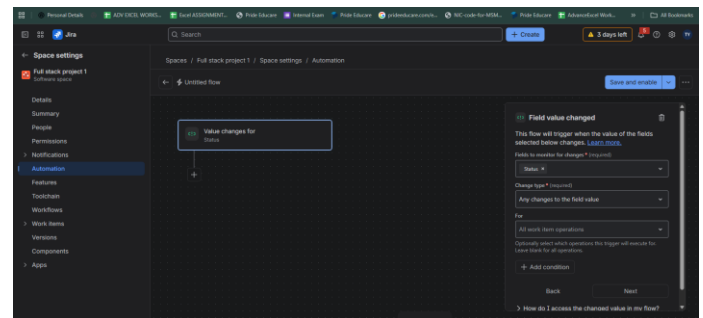

1. Open the required Jira Project/Space.
2. Click the Automation (⚡) option.

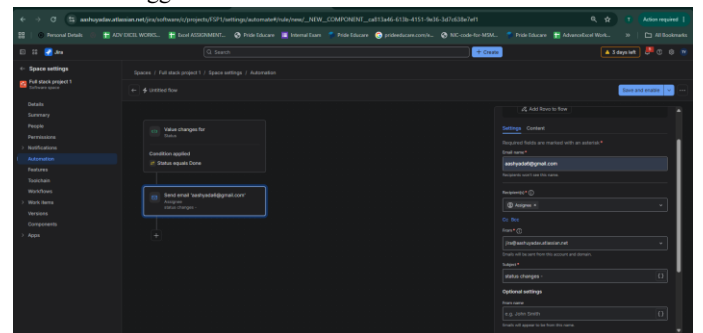

3. Click Create automation.

4. Click Next/Get started.
5. Click Add a trigger.

6. Search for Field value changed.
7. Select Field value changed.
8. In Fields to monitor for changes, select Status.
9. Keep Change type as Any changes to the field value.
10. Keep For as All work item operations.
11. Add the trigger.

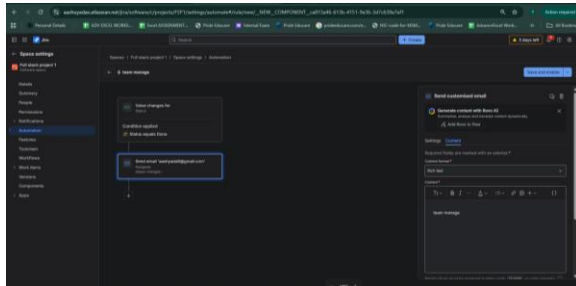

B. Configure rule (e.g., When issue is moved to Done → send email / auto-assign).

Theory:

Conditions control when an automation rule runs and actions define what it performs.

Steps:

1. After creating the trigger, click Add a condition.
2. Select Work item field condition.
3. Set Field = Status.
4. Set Condition = Equals.
5. Set Value = Done.
6. Click Next.
7. Click Add an action.
8. Select Send email. Enter the required email details.
9. Enter the required Subject and Message.
10. Click Next/Save.

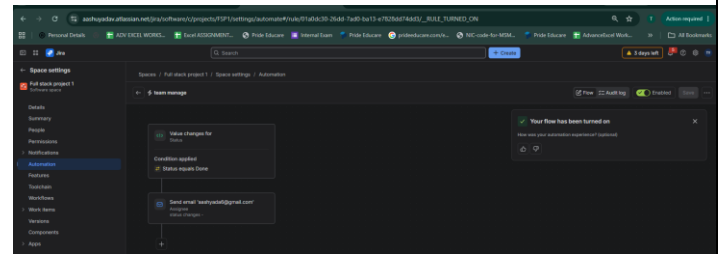

C. Test and enable automation rules.

Theory: Testing and enabling verifies that the automation rule works correctly.

Steps:

1. Click Turn on flow.
2. Enter flow name.
3. Click Turn on flow.
4. Change a work item's status.

5. Check whether you will receive emails
